

Introduction

The BMI System App development project involves creating a user-friendly application to calculate Body Mass Index (BMI) for individuals. The project team consists of four members, each with unique roles and responsibilities. This report aims to outline the work contributions and instructions provided by each team member during the development process.

Introduction to run the app

- This is the UI design you will see once the app is opens.
- You have to input correct measurements to get the BMI correctly.
- Frist you have to choose the gender to fill other details.
- If you didn't choose a gender and click the calculate button u will get a warning saying "choose a gender".
- After choosing a gender you have to drag the height panel to input the correct height.
- After entering the height you have to place the weight and age by clicking the increment and decrement buttons.

- Then you can click the calculating button to get the final results.
- This is the UI design of the final results.

String XML

```
<resources>
  <string name="app_name">BMI</string>
  <string name="age">Age</string>
  <string name="height">Height</string>
  <string name="weight">Weight</string>
  <string name="calculate_your_bmi">CALCULATE YOUR BMI</string>
  <string name="normal">Normal</string>
  <string name="recalculate_your_bmi">RECALCULATE YOUR BMI</string>
</resources>
```

Color XML

```
<resources>
  <color name="black">#FF000000</color>
  <color name="white">#FFFFFFFF</color>
  <color name="red">#FF0000</color>
</resources>
